

Angad Singh Josan

425-615-2461 | angad.josan@berkeley.edu | linkedin.com/in/angad-singh-josan | github.com/angadjosan

University of California, Berkeley

May 2028

B.S. in Electrical Engineering and Computer Sciences (EECS), GPA: 3.83/4.00

- **Coursework:** Machine Learning, Data Structures & Algorithms, Computer Architecture, Internet Architecture & Networking, Computer Security, Discrete & Probability Theory
- **Planned:** Operating Systems, Database Systems, Parallel Computing, Integrated Circuits & FPGA

EXPERIENCE

Software Engineer Intern

May 2026 – Aug. 2026

Xealth (a Samsung company)

Seattle, WA

- Built a prompt-learning AI agent on **Databricks DSPy/GEPA**, tailoring pre-op instructions for **600+ hospitals**
- Migrated **400M** analytics events from **AWS Glue** to **Spark** Declarative streaming pipelines, cutting latency **90%**
- Built a self-healing migration agent with **Spark SQL** row-count diff checks, saving **800 hours** over 100 Glue jobs

Software Engineer Intern, AI

Jan. 2026 – Mar. 2026

Skyline

San Francisco, CA

- Built real-time voice AI for real estate lead sourcing and qualification, increasing qualified lead throughput **1.7x**
- Implemented a **WebRTC** voice streaming pipeline with **Gemini** and ElevenLabs, achieving **sub-100ms** latency
- Engineered conversation state orchestration and interruption handling, maintaining a **>99%** session completion rate

Artificial Intelligence Intern

Nov. 2025 – Jan. 2026

Jumping Tree Capital

San Francisco, CA

- Built a **Claude** and **n8n** multi-agent pipeline sourcing **2,500+** influencers, adding **\$250k** in influencer pipeline
- Shipped an agent that auto-optimizes **Shopify** storefront copy against live conversion data, lifting conversion **50%**

Machine Learning Engineer Intern

Apr. 2024 – Sep. 2024

Class Proxima

Seattle, WA

- Architected AI daily video summary system for parents in childcare centers, saving **520+ hours** of review time
- Fine-tuned **CLIP** models with **PyTorch**, achieving **83%** accuracy on proprietary childcare data, tracked in **W&B**
- Reduced **CLIP** inference latency **57%** via post-training **quantization**, dynamic batching, and **PCA** compression

PROJECTS

TrajCache | *Rust* | github.com/angadjosan/trajcache

- Built a **Rust** cache reusing RL sandbox state across agent tool calls, cutting setup **30.6ms to 14.4μs (2,100x)**
- Cut branch storage **326x** with **copy-on-write** forks storing a rollout tree's shared action prefix exactly once
- Named every state by a **BLAKE3** Merkle hash, quarantining nondeterministic tools by re-executing sampled hits

AlpaRun | *Python, PyTorch* | github.com/angadjosan/alparun

- Built a cache layer for **NVIDIA Alpa** driving models, cutting inference **224 to 121ms** across 4 tasks/clip
- Reused vision encodes across **10Hz** camera windows sharing 3 of 4 frames, cutting stream latency **442 to 298ms**
- Designed a deadline-aware scheduler predicting cache hits, raising full-quality cycles **0% to 100%** at a 60ms budget

Sentinel (trysentinel.dev) | *Python, gVisor* | github.com/angadjosan/sentinel

- Built an AI agent security harness that proves exploits before shipping, at **85% recall** on seeded vulnerabilities
- Cut false positives by exploiting every finding inside a **gVisor** sandbox over a **Tree-sitter** call and data-flow graph
- Ran **SAST**, **SCA**, and secret scanning on each diff in **46ms**, run through a **gVisor** and Docker sandbox on-prem

Galley | *TypeScript, React* | github.com/angadjosan/galley

- Built a real-time multiplayer Markdown editor, creating simplified live collaboration between AI agents and humans
- Wrote a **Loro CRDT** sync engine splicing Markdown in place, at **3ms** edit-to-applied across **64** concurrent editors
- Shipped a **Figma-like design canvas** beside the docs, backed by a closed flexbox vocabulary with a strict linter

TECHNICAL SKILLS

Languages: Python, TypeScript, Rust, JavaScript, Java, C, C++, Kotlin, R, SQL

Frameworks & Cloud: React, Next.js, Node.js, FastAPI, PostgreSQL, Supabase, Spark, Databricks, AWS, GCP

AI & ML: PyTorch, DSPy, MLflow, LangChain, W&B

Developer Tools: Git, Docker, gVisor, MongoDB, GitHub Actions, WebRTC, Playwright, pytest
